

KnightMed Health Corps
GVHP Presentation

Who we are: A group of students at SUNY Geneseo interested in the health care field.

Our Mission: KnightMed Health Corps is an organization of students at SUNY Geneseo who strive to aid local, regional and global communities in their health needs. As students, we will address these needs with two main goals: to create healthier communities and to gain knowledge through experience in the healthcare field. By partnering with communities (working *with* them, not *for* them) we aim to work compassionately and effectively for those we serve by exchanging appropriate knowledge and resources.

Goals for a partnership:

-As our mission states, we aim to work *with* the communities we serve, meaning that our work will go beyond that of volunteerism and internship. We seek an active partnership between GVHP partner organizations and ourselves that is mutually beneficial. (If volunteer and internship-type opportunities are available, still let us know. Though our main goal as a group is to sustain long-term projects, individuals in the group may still be interested in these opportunities).

What we have to offer:

- As the county's only university, we have a concentration of highly educated community members who can assist with planning and research.
- SUNY Geneseo has many students interested in the health care field, so we have a fairly large pool to draw from (over 70 students have already expressed interest in this group).
- As students with young, active minds, we can offer a new perspective to any initiative already in place.
